MERIT BADGE SERIES

PROGRAMMING

STEM-Based

BOY SCOUTS OF AMERICA®
PROGRAMMING

"Enhancing our youths' competitive edge through merit badges"
Note to the Counselor

Thank you for offering your talents as a merit badge counselor. Scouting’s merit badge program succeeds because of the dedication and generosity of people like you.

This merit badge is intended to introduce Scouts to programming, to help them understand how programming affects them in their everyday lives, and to help them realize that programming is something any Scout can do and even possibly pursue as a career.

To that end, the requirements are designed simply to expose the Scout to several kinds of programming in different industries—not to turn the Scout into a “programmer.” Please help guide the Scout to make project choices that are fun and relatively simple.

Supporting this merit badge is an online resource, www.scoutlife.org/programming, where the Scout will find many examples, video tutorials, and development tools provided at minimal or no cost. This resource is presented with the young Scout in mind and serves as the starting point for accomplishing the “meat” of the merit badge requirements (specifically requirements 5a–5d).

Before spending a lot of time and effort on the requirements, the Scout should meet with you to be sure the requirements are being met to your satisfaction.
For the purposes of this badge, we expect a program to take an input, make decisions based on that input, and then provide an output based on those decisions. Scouts should write the instructions in the languages and development environments of their choice. While “programming” a home thermostat or a DVR is not an acceptable project, creating a macro in a spreadsheet program could qualify as a project if you think it is appropriate. Please guide the Scout accordingly.

Also note that the requirements do not restrict the code from being run natively on an actual ‘machine.’ Running the program on a simulated machine or in a virtual world is fine. For example, most cell phone development environments provide cell phone simulators with which the code can be tested.

Thank you again for your service. Now, let’s get some Scouts excited about programming!
Requirements

Always check www.scouting.org for the latest requirements.

1. Safety. Do the following:
   a. Show your counselor your current, up-to-date Cyber Chip.
   b. Discuss first aid and prevention for the types of injuries that could occur during programming activities, including repetitive stress injuries and eyestrain.

2. History. Do the following:
   a. Give a brief history of programming, including at least three milestones related to the advancement or development of programming.
   b. Discuss with your counselor the history of programming and the evolution of programming languages.

3. General knowledge. Do the following:
   a. Create a list of five popular programming languages in use today and describe which industry or industries they are primarily used in and why.
   b. Describe three different programmed devices you rely on every day.

4. Intellectual property. Do the following:
   a. Explain the four types of intellectual property used to protect computer programs.
   b. Describe the difference between licensing and owning software.
   c. Describe the differences between freeware, open source, and commercial software, and why it is important to respect the terms of use of each.

5. Projects. Do the following:
   a. With your counselor’s approval, choose a sample program. Modify the code or add a function or subroutine to it. Debug and demonstrate the modified program to your counselor.
b. With your counselor’s approval, choose a second programming language and development environment, different from those used for requirement 5a and in a different industry from 5a. Then write, debug, and demonstrate a functioning program to your counselor, using that language and environment.

c. With your counselor’s approval, choose a third programming language and development environment, different from those used for requirements 5a and 5b and in a different industry from 5a or 5b. Then write, debug, and demonstrate a functioning program to your counselor, using that language and environment.

d. Explain how the programs you wrote for requirements 5a, 5b, and 5c process inputs, how they make decisions based on those inputs, and how they provide outputs based on the decision making.

6. Careers. Find out about three career opportunities that require knowledge in programming. Pick one and find out the education, training, and experience required. Discuss this with your counselor and explain why this career might be of interest to you.
Programming Resources

Scouting Literature

*Animation, Communication, Digital Technology, Electronics, Game Design,* and *Robotics* merit badge pamphlets

With your parent’s permission, visit the Boy Scouts of America’s official retail website, www.scoutshop.org, for a complete listing of all merit badge pamphlets and other helpful Scouting materials and supplies.

Books

Organizations and Websites

**Android**

Special thanks to Automation Direct.com, an industry leader in factory automation, for providing the services of Rick Folea. He coordinated the development of the Programming merit badge, and AutomationDirect.com supported the launch of the merit badge at the 2013 National Scout Jamboree with equipment, supplies, and personnel.
