

MERIT BADGE SERIES

ASTRONOMY

BOY SCOUTS OF AMERICA®

STEM-Based

BOY SCOUTS OF AMERICA
MERIT BADGE SERIES

ASTRONOMY

"Enhancing our youths' competitive edge through merit badges"

BOY SCOUTS OF AMERICA®

Requirements

1. Do the following:
 - a. Explain to your counselor the most likely hazards you may encounter while participating in astronomy activities, and what you should do to anticipate, help prevent, mitigate, and respond to these hazards.
 - b. Explain first aid for injuries or illnesses such as heat and cold reactions, dehydration, bites and stings, and damage to your eyes that could occur during observation.
 - c. Describe the proper clothing and other precautions for safely making observations at night and in cold weather. Then explain how to safely observe the Sun, objects near the Sun, and the Moon.
2. Explain what light pollution is and how it and air pollution affect astronomy.
3. With the aid of diagrams (or real telescopes if available), do each of the following:
 - a. Explain why binoculars and telescopes are important astronomical tools. Demonstrate or explain how these tools are used.
 - b. Describe the similarities and differences of several types of astronomical telescopes, including at least one that observes light beyond the visible part of the spectrum (i.e., radio, X-ray, ultraviolet, or infrared).
 - c. Explain the purposes of at least three instruments used with astronomical telescopes.
 - d. Describe the proper care and storage of telescopes and binoculars both at home and in the field.
4. Do the following:
 - a. Identify in the sky at least 10 constellations, at least four of which are in the zodiac.

For requirement
4, if instruction
is done in a
planetarium,
Scouts must still
identify the
required stars and
constellations
under the natural
night sky.

- b. Identify in the sky at least eight conspicuous stars, five of which are of magnitude 1 or brighter.
 - c. Make two sketches of the Big Dipper. In one sketch, show the Big Dipper's orientation in the early evening sky. In another sketch, show its position several hours later. In both sketches, show the North Star and the horizon. Record the date and time each sketch was made.
 - d. Explain what we see when we look at the Milky Way.
5. Do the following:
- a. List the names of the five most visible planets. Explain which ones can appear in phases similar to lunar phases and which ones cannot, and explain why.
 - b. Using the Internet (with your parent's permission), books, and other resources, find out when each of the five most visible planets that you identified in requirement 5a will be observable in the evening sky during the next 12 months. Then compile this information in the form of a chart or table.
 - c. Describe the motion of the planets across the sky.
 - d. Observe a planet and describe what you saw.
6. Do the following:
- a. Sketch the face of the Moon and indicate at least five seas and five craters. Label these landmarks.
 - b. Sketch the phase and the daily position of the Moon, at the same hour and place, for four nights within a one week period. Include landmarks on the horizon such as hills, trees, and buildings. Explain the changes you observe.
 - c. List the factors that keep the Moon in orbit around Earth.
 - d. With the aid of diagrams, explain the relative positions of the Sun, Earth, and the Moon at the times of lunar and solar eclipses, and at the times of new, first-quarter, full, and last-quarter phases of the Moon.
7. Do the following:
- a. Describe the composition of the Sun, its relationship to other stars, and some effects of its radiation on Earth's weather and communications.
 - b. Define sunspots and describe some of the effects they may have on solar radiation.

- c. Identify at least one red star, one blue star, and one yellow star (other than the Sun). Explain the meaning of these colors.
8. With your counselor's approval and guidance, do ONE of the following:
 - a. Visit a planetarium or astronomical observatory. Submit a written report, a scrapbook, or a video presentation afterward to your counselor that includes the following information:
 - (1) Activities occurring there
 - (2) Exhibits and displays you saw
 - (3) Telescopes and other instruments being used
 - (4) Celestial objects you observed
 - b. Plan and participate in a three-hour observation session that includes using binoculars or a telescope. List the celestial objects you want to observe, and find each on a star chart or in a guidebook. Prepare an observing log or notebook. Discuss with your counselor what you hope to observe prior to your observation session. Review your log or notebook with your counselor afterward.
 - c. Plan and host a star party for your Scout troop or other group such as your class at school. Use binoculars or a telescope to show and explain celestial objects to the group.
 - d. Help an astronomy club in your community hold a star party that is open to the public.
 - e. Personally take a series of photographs or digital images of the movement of the Moon, a planet, an asteroid, meteor, or a comet. In your visual display, label each image and include the date and time it was taken. Show all positions on a star chart or map. Show your display at school or at a troop meeting. Explain the changes you observed.
9. Find out about three career opportunities in astronomy. Pick one and find out the education, training, and experience required for this profession. Discuss this with your counselor, and explain why this profession might interest you.

Astronomy Resources

Scouting Literature

Deck of Stars; Night Sky pocket guide; *Chemistry, Computers, Geology, Nuclear Science, Photography, Radio, Space Exploration*, and *Weather* merit badge pamphlets

Visit the Boy Scouts of America's official retail website at <http://www.scoutstuff.org> for a complete listing of all merit badge pamphlets and other helpful Scouting materials and supplies.

Acknowledgments

The Boy Scouts of America thanks William Cress, Beaver Falls, Pennsylvania, who is a longtime Astronomy merit badge counselor and an experienced amateur astronomer. We appreciate immensely his knowledge, advice, and support in helping to update the *Astronomy* merit badge pamphlet. He gathered an impressive group of fellow astronomers to assist in this effort, and we thank them here, as well:

- Jane Konrad, Pittsburgh Regional Center for Science Teachers and the Pennsylvania NASA Educator Resource Center
- Dan Malerbo, Buhl Digital Dome, Carnegie Science Center, Pittsburgh, Pennsylvania
- Tim Manka, retired science instructor, an Astronomy merit badge counselor since 1966
- Jean Philpott, Buhl Digital Dome, Carnegie Science Center, Pittsburgh, Pennsylvania
- Pat Plunkett, Wheeling (West Virginia) Jesuit University
- Tom Reiland, founder, Wagman Observatory, western Pennsylvania

The Boy Scouts of America thanks Chris Martin, associate professor of physics at Oberlin (Ohio) College, for reviewing the *Astronomy* merit badge pamphlet and providing updates.

We are grateful to Marcus Valdez, Fanwood, New Jersey, who serves as assistant Scoutmaster of Troop 33, and to the Amateur Astronomers of William Miller Sperry Observatory at Union County College in Cranford, New Jersey, for their assistance with photography.

The Boy Scouts of America is grateful to Al Dorn and the Omaha Astronomical Society for their expertise, assistance, and guidance in updating requirements for the Astronomy merit badge and support in developing the 2004 edition. The Society's website, found at <http://www.omahaastro.com>, provides a wealth of information for the beginner amateur astronomer as well as those who have developed a more serious interest.

The Boy Scouts of America is grateful to the men and women serving on the Merit Badge Maintenance Task Force for the improvements made in updating this pamphlet.
