

# Welcome to Fiix!

This software will be a game changer for the Boy Scouts of America and the maintenance of all its properties.

You'll be pleased by the:

Ease of use

Cost effectiveness

Comprehensive knowledge base

## Important Background

- Properly maintaining facilities is critical to controlling costs.
- The BSA has many properties with no consistent maintenance plan.
- The funding for maintaining these properties is inconsistent.
- We don't know the value of the need overall!

**Official partner  
of the BSA**

The Boy Scouts of America has teamed with Fiix, a maintenance software company, so councils can determine their overall maintenance needs and the value those needs represent.

The software allows councils to:

Budget more appropriately

Better maintain their properties

Schedule maintenance of their facilities

## Cost

**Initial cost is \$348 a year per user.**  
This equates to \$29 a month.

A user is someone designated in the council who oversees the council property and would maintain the maintenance record, typically a ranger. But the council may have multiple properties with multiple rangers. In that case, the director of support services may be the initial user. The rangers can all access a master account to log in assets and work orders initially, moving toward individual accounts as the cost decreases.

[LEARN MORE](#)

**Eventually the annual rate will be \$120/year per user!**

The cost decreases with each threshold met.

Of course, if the council is in a position to provide enough user accounts so its property personnel can each have an individual login, then by all means register all users at one time. The quicker we have more users, the quicker we reach our cost reduction thresholds. Thresholds are at 50, 100, 250, 500, and 1,000 users.

## Support — We have your back!

In the process of bringing this software package to the BSA, a development team of professionals, rangers, and property personnel was established. This group will be available to help guide you as you get started, be available to deliver some hands-on training, and be a support mechanism so you're not left in the dark. Knowing the coming value this software will provide the organization, there are people in place who are dedicated to making this work for all of us. The software is easy to use and easy to learn, and will provide us individually, as well as collectively, with very valuable information to help improve the organization as a whole. Join with us now to make these needed improvements!
